

Abstract

METHOD FOR LOGGING IN A TERMINAL AT AN ACCESS POINT OF A LOCAL
COMMUNICATION NETWORK

5

The invention relates to a method for the initial login of an
especially mobile terminal at an access point of a local
communication network, whereby a first transmission power of a
first radio transmitter/radio receiver of the access point is
10 reduced after detection of the terminal, in such a way that a
transmission/reception process can only be carried out in a
near field of the access point. The invention also relates to
an access point and to a terminal for carrying out the method.
